- Care about your family: Family Bundle | Buy 3+ Get 10% OFF (Automatic Discount)

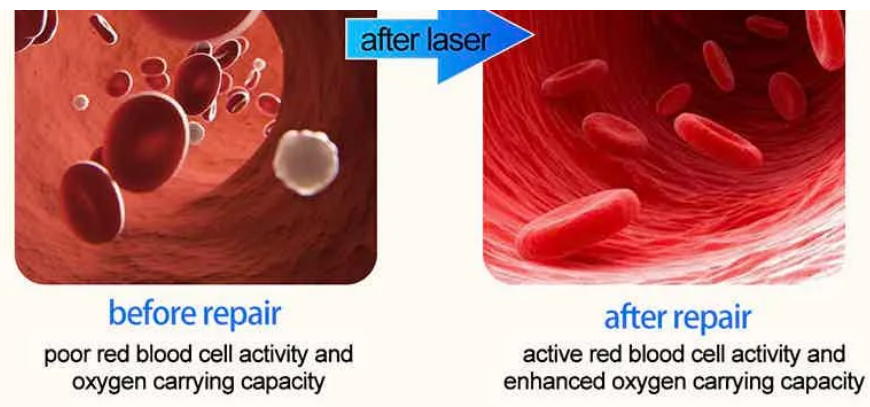

Blood Sugar Monitoring Made Easier

For those who live with diabetes, constant monitoring of blood sugar levels is essential to maintaining good health. However, **traditional methods** of testing often involve painful finger pricks. How awful it is to feel like **you can't test it** anymore because you're in pain all the time.

Taking advantage of the technology, The Suga Prouses non-invasive technology to measure blood sugar levels by shining a 650nm wavelength laser light from the bottom of the device into your skin to measure the amount of light that is reflected back. The reflection allows the watch to calculate your blood sugar levels using a special mathematical equation. Simply wear on your wrist and forget it!

Laser Treatment Physiotherapy

Laser Physiotherapy, also known as low-level laser therapy (LLLT) or cold laser therapy, is a non-invasive medical treatment that uses low-intensity laser light to stimulate healing and promote various biological processes in the body. It has gained recognition and popularity in the field of medical and rehabilitative care.

During laser therapy, a handheld device emits focused beams of light in the form of laser energy. The light energy penetrates the skin and reaches the targeted tissues and cells beneath. The laser light interacts with cells, triggering a series of biochemical reactions at the cellular level.

These reactions can have several beneficial effects on the body. Laser therapy is believed to increase cellular energy production, enhance blood circulation, reduce inflammation, and promote tissue repair and regeneration. It can also stimulate the release of certain substances, such as endorphins, which can help reduce pain and promote a sense of well-being.

It's incredibly simple to use. You can finally get back to living again:

- Recommended and endorsed by doctors.

- No medicines. Helps you get back to living your fullest life.
- Accelerated healing: Improve blood flow, metabolism, promotes tissue repair and regeneration.

Is the blood sugar level in the regular U.S meter reading?

Of course, it is! In fact you can switch from mmol/L to mg/dL very easy within the app. The app named HealthWear and you can download it by scanning QR code in your manual user.

Remote Family Health Care Feature is still available! (Buy More, Save More)
