Brad,

It looks like At 12:07 PM 8/3/2012, you wrote:

M27C256B-70XF1: faster 70 ns, "X" designates +/- 5% Vcc tolerance.
They will have to see if can use the 5%.

will work. We will need to try them.

MikeR

Brad,

We can no longer order the Atmel M27C256B-10F1: I listed options below

Only possible options:

M27C256B-12F1: slower 120 ns. .

M27C256B-70XF1: faster 70 ns, "X" designates +/- 5% Vcc tolerance.
They will have to see if can use the 5%.

M27C256B-15F1 - much slower 150 ns.

Note that the "B" suffix (e.g., -90B1) is plastic one-time programmable. Cannot erase and re-program that you can with the windowed cerdip.

"C" suffix (e.g., -90C6) is PLCC. completely different package.

thanks

Pat for Lisa

Brad,
On the above order/part, the STMicro part you show is discontinued and we have no stock.

M27C256B-10F1

Do you have any alternates approved?

We do have some stock on a slower speed, M27C256B-15F1, if you can use this one.

It is also discontinued, but we happen to have stock.

Please advise.

Thanks!

Lisa
