 SemiNex-Artemis Biomedical Mutual NDA 8-10-2020.docx (~104 KB)

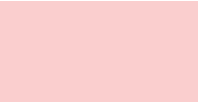

Hi Mike,

It looks like we have discussed your application back in 2014-2015. I started with an email with a bunch of questions and then when I filed a copy of our NDA in my Atremis folder and I saw that there was a tremendous amount of back and forth between our two companies back in 2014 and 2015. I'm not sure if much has changed from your side regarding the lasers you need and the use of VBG's. I worked for PD-LD, Inc. when they were first introducing volume Bragg gratings, so I have very good knowledge of the capabilities. For your application, if it has not changed, we would need to use a special low A/R coating on the laser diodes.

Let's get an NDA together and then I would suggest a conference call to see exactly what you need today. If you prefer your NDA, please send it along to me.

Best regards and stay healthy,

Ed. McIntyre

Hi Ed,

I could not answer the survey questions without having done business with SemiNex in the past. However here is an opportunity for doing so.

I need laser diodes of up to 300mW in the NIR range. The application can cover a prevalent need that is expected to result to a very large volume for several years. If SemiNex is capable and interested, we will work out an NDA and discuss details. So please let me know.

Thanks,

Mike
