

Spectroscopy

[Advanced Photonix](#) > [APX Applications](#) > [Spectroscopy](#)

A spectrophotometer identifies colors by assigning numerical values to hue, value, and chroma properties.

We are a leading optoelectronics solution provider in color science and technology for the state-of-the-art spectrophotometers for

most discerning color management systems.

We design and manufacture multi-element photodiode arrays to address your most demanding needs. You'll be working closely with our expert applications engineering team to collaboratively identify the best possible photodiodes, offering minimum cross-talk between adjacent elements, high responsivity, and added optical filters.
