Description

Ushio brand MR16 halogen scientific lamp. 150 Watts for more power and light. 21 volts for use in technical lighting systems.

- Dichroic reflector reflects visible light out the front while letting heat escape out the back, resulting in a cool beam of light
- Performance - well known brand name product at competitive price

NO LENS - enclosed fixture recommended

5 Great customer service

Light works as descibed. It's a direct replacement.

Comments about the Service

I have used other companies in the past and have often encountered difficulty getting the specialty bulbs and other products we need. In fact we have a bulb specialty warehouse two blocks from our facility that I no longer use because customer service was not their primary concern. So as a purchasing manager I searched for a company that provided quality customer service, competitive pricing, and a user friendly website. I found Bulbs.com to be above and beyond my expectations in every department. I would, do and will recommend them to anyone. Thank you for your excellent service and attentiveness to us your customers.

Asked by Joe 4 months ago

Q If I use the 21V/150W bulb in a fixture that suggests a 22.8V/150W will it blow quickly?

[Add your answer](#)

Verified Reply - Andy

That small of a difference in voltage won't make a significant difference in the life of the bulb.

Asked by SEW 4 months ago

Q What is the rating in Lumens?

[Add your answer](#)

Verified Reply - Andy

The manufacturer does not list the lumen output but you can generally expect around 2000 lumens out of a 150W Halogen bulb.
